PROFESSIONAL SUMMARY

AI Integration Engineer and Product Engineer with 4+ years building digital infrastructure for emerging markets across fintech, healthcare, agriculture, and education. I design and ship production multi-agent AI systems embedded inside existing products — Guard → Classify → Specialist agent pipelines grounded on live APIs, gated by real auth and subscription tiers, with graceful human handoff. I also build the React Native apps around them. 8+ live apps on the App Store and Google Play, used by thousands of real users across Africa.

Key Expertise:

- Embedded AI engineering — multi-agent orchestration (OpenAI Agents SDK, Claude API, Gemini), tool use / function calling, RAG, serverless deployment (RunPod), Python/FastAPI backends.
- Full product ownership — mobile architecture, backend APIs, CI/CD, App Store & Play Store deployment, analytics-driven iteration.
- Offline-first engineering — hard-won reliability for low-bandwidth, low-connectivity environments across emerging markets.

AI SYSTEMS SHIPPED (PRODUCTION)

SmartHealth AI • Healthcare

Multi-agent assistant embedded in a live telemedicine app — Guard, Classification, and specialist agents grounded on real patient APIs, role-gated capabilities, and automatic handoff to a doctor below confidence threshold. Zero hallucinated medical data in production. Built on OpenAI Agents SDK + Python/FastAPI, self-hosted on RunPod.

Gadgetify Shopping Agent • E-Commerce

Conversational shopping assistant in a Flutter storefront — Python multi-agent pipeline (guard, classification, details, order-taking, recommendation, e-commerce agents) calling a Laravel API, deployed serverless on RunPod. Users discover products, get recommendations, and check out entirely through natural language chat.

CampusGenie Study AI • EdTech

OpenAI-powered question generation, adaptive study planning, and personalised exam recommendations across 63+ JAMB/WAEC subjects — engineered for offline-first delivery to students in low-connectivity environments.

SCDHelper Health Assistant • Healthcare

Gemini-powered 24/7 assistant for Sickle Cell Disease patients with emergency quick-action modes for crisis response when clinicians are unreachable.

Vant AI Financial Planner • Fintech

OpenAI integration that analyses real income, spending, and bills to generate personalised savings plans automatically inside a consumer banking app.

SKILLS & TECHNOLOGIES

AI / Agents	OpenAI Agents SDK, Claude API (Anthropic), Google Gemini, multi-agent orchestration, tool use / function calling, RAG pipelines, guardrail design, Python, FastAPI, RunPod serverless
Mobile	React Native, Flutter (GetX), Expo SDK, OTA Updates (CodePush), App Store & Play Store deployment
Backend / API	Node.js, Laravel, REST, GraphQL, JWT, Firebase, Redis, Socket.IO, webhook handling
Languages	TypeScript, JavaScript, Python, Dart, HTML5, CSS3
State & Data	Redux Toolkit, TanStack Query, Realm, SQLite, AsyncStorage (offline-first)

Payments	Stripe, Paystack, multi-currency, subscription gating
Real-time	Stream Chat & Video SDK, LiveKit (self-hosted), WebSockets
Quality & Ops	Sentry, Mixpanel, LogRocket, Firebase Analytics, GitHub Actions, CI/CD

EXPERIENCE

Mobile / Product Engineer • Interswitch Group Limited

Jul 2025 – Present

- Built and embedded the SmartHealth multi-agent AI assistant — Guard → Classification → specialist agents calling live patient APIs with role-gated capabilities and automatic doctor handoff below a confidence threshold, eliminating hallucinated medical data in production.
- Shipped the telemedicine platform itself: real-time video/audio consultations (self-hosted LiveKit replacing expensive third-party SDKs), comprehensive medical records system with real-time search, and a custom microservice for call management.
- Made quality healthcare accessible to thousands of patients across Nigeria — reduced post-launch defect rate by over 50% through Firebase and Sentry instrumentation, enabling weekly iteration.

AI / Mobile Engineer • Gadgetify

2024 – 2025

- Designed and deployed a Python multi-agent shopping assistant (guard, classification, details, order-taking, recommendation, e-commerce agents) on RunPod serverless, grounded on the store's Laravel API with Sanctum bearer-token auth flowing through the agent layer.
- Enabled full conversational commerce — users discover products, get recommendations, and check out entirely through natural language chat.
- Built the Flutter storefront around it: catalogue, cart, orders, payments, and full localisation (EN/AR/BN with right-to-left layout support).

Mobile / Product Engineer • Geinny App (SCDHelper)

Jan 2025 – Jun 2025

- Improved daily disease management for thousands of Sick Cell Disease patients across Nigeria — built the health tracker (React Native/Expo) covering pain logging, medication adherence, vitals monitoring, and nutrition.
- Designed a Gemini-powered AI health assistant with emergency quick-action modes, providing 24/7 personalised guidance and crisis support when medical professionals are unavailable.
- Enabled commercial viability across African markets by implementing multi-tier subscriptions (Stripe, Paystack), feature-gating middleware, biometric auth, and accessibility-first component design.

Lead Product / Mobile Engineer • SenjuLabs Technologies

Dec 2023 – Aug 2024

- Democratised exam preparation for tens of thousands of Nigerian students by leading the full build of CampusGenie — an offline-first AI-powered study platform covering 63+ JAMB/WAEC subjects, functional with zero internet connectivity.
- Integrated OpenAI for intelligent question generation, adaptive study planning, and personalised exam recommendations targeting each student's weak areas.
- Increased daily active usage through gamification (streaks, challenge rooms, leaderboards) and drove continuous UX improvement via Mixpanel, Sentry, and LogRocket.

Mobile Engineer • Farmsmarter LTD

Apr 2024 – Jul 2025

- Brought modern farm management to smallholder farmers in off-grid rural Nigeria — built FarmSmarter offline-first (Realm) with custom GPS field boundary mapping (Google Maps SDK, polygon drawing), validated through field testing on low-end Android devices.

Mobile Software Engineer • Vant App Africa

Jan 2023 – Feb 2024

- Improved financial inclusion for underbanked Nigerians by building core fintech features (bank-to-bank transfers, bill payments, savings, transaction history) and an AI financial planning tool (OpenAI) generating personalised savings plans from real spending data.

Mobile Developer • Theragist Technologies LTD

Jan 2024 – Sep 2024

- Built a mental healthcare platform with real-time chat and video (Stream SDK), booking management, and 'Theragist Space' — a live audio room feature for group therapy and community mental health discussions.

Mobile Software Engineer • Eaglion Global Technologies

Oct 2022 – Mar 2023

- Built Konix — removed the biggest barrier to cross-border luxury shopping for African consumers (foreign currency cards) with automatic Naira conversion, full commerce stack, and WebView storefronts for Adidas, Hermès, and Nike.

Mobile Developer • Flashride Nigeria

Nov 2021 – Sep 2022

- Built FlashRide (passenger) and FlashDriver (driver) from scratch — real-time ride requests, live tracking, Google Maps route optimisation, payments — deployed to both stores.

NOTABLE PROJECTS

SmartHealth – Telemedicine + Multi-Agent AI | [Live →](#)

Stack: React Native, OpenAI Agents SDK, Python/FastAPI, LiveKit (self-hosted), Socket.IO, Redis, Firebase Auth

Full telemedicine platform with an embedded multi-agent AI assistant — serving thousands of patients across Nigeria with secure video/audio consultations, appointment scheduling, medical records, and AI-guided clinical support. Live on Google Play.

Gadgetify – AI Shopping Agent + Flutter Storefront | [Live →](#)

Stack: Flutter, GetX, Python multi-agent AI, RunPod serverless, Laravel, Firebase, Sanctum Auth

E-commerce platform with a production multi-agent conversational assistant — users discover, compare, and purchase products entirely through natural language. Guard → Classify → Specialist agent architecture deployed serverless. EN/AR/BN with RTL support.

CampusGenie – AI Exam Prep Platform | [Live →](#)

Stack: React Native, Expo, OpenAI, Firebase, Google Maps, TanStack Query

Offline-first educational platform for tens of thousands of Nigerian JAMB/WAEC students — AI question generation, adaptive study planning, CBT centre mapping, and gamification across 63+ subjects. Live on Google Play.

Vant App Africa – Fintech + AI Financial Planning | [Live →](#)

Stack: React Native, Expo SDK, OpenAI API, Firebase Auth, Redux Toolkit

Consumer fintech app with AI-driven financial planning — bank transfers, bill payments, savings management, and an OpenAI tool that auto-generates personalised savings plans from real spending data. Live on Google Play.

EDUCATION

B.Tech, Geophysics

Jan 2018 – Aug 2023

Ondo State University of Science and Technology, Ondo State, Nigeria

CERTIFICATIONS

- Google Ads Certifications — Measurement, Shopping, Video, Analytics, Search, Display
- JavaScript, React & Angular — Expert Level (Pluralsight, 2019)
- HTML & CSS — Expert Level (Pluralsight, 2019)
- Introduction to Computer Science (edX / Harvard, 2018)
